(Latest version)

EDUCATION BACKGROUND

Hong Kong University of Science and Technology

Ph.D., Quantitative Marketing

2026 (expected)

M.Phil., Quantitative Marketing

2022

University of Rochester

M.Sc., Business Research, Information System

2020

University of Science and Technology of China

B.S., Statistics, *Gold Award (Top 1%)*

2018

Exchange at the Washington University in St. Louis

RESEARCH INTERESTS

Substantive

Digital Platforms, Consumer Choice Dynamics, Media Influence

Methodological

Deep Learning for Graphs, Deep Generative Models, Causal Inference, Bayesian Estimation Methods, Natural Language Processing

HONORS AND AWARDS

Best Paper Award, Asia-Pacific Marketing Academy Annual Conference (APMA) 2025

Runner-up, HKUST Business School PhD Student Conference 2025

Fellow, ISMS Marketing Science Doctoral Consortium 2025

SBM Dean's PhD Fellowship, HKUST 2023–2024

Postgraduate Scholarship, HKUST 2020–2025

Simon Business School Doctoral Fellowship 2018–2020

UGC Research Travel Award×3, HKUST 2022–2025

Outstanding Undergraduate Thesis Award, USTC 2018

Gold medal (Top 10 in China) in WorldQuant Challenge Alphathon 2017

WORKING PAPERS

Yue Wang, Yi Zhao, Ying Zhao, “Demand Structure in Two-Sided Markets: A Network Based Revenue Analysis Approach.”

– *Job Market Paper*

– *Best Paper Award*, Asia-Pacific Marketing Academy Annual Conference (APMA) 2025

Yue Wang, Ying Zhao, Yi Zhao, Yang Shi, “The Influence of News from Different Media Channels on Consumer Purchase: Insights from the Chinese Pharmaceutical Market.”

– Reject & Resubmit at *Marketing Science*

Yue Wang, Ying Zhao, Min Zhao, “Show Me Some Effort! The Effect of Liking versus Comments and Their Presentation Format on User-Generated Content.” *Preparing for submission*

Yue Wang, Xiaobei Shen, Xiabing Zheng, “Ride The Wave or Not? The Spillover Effect of Online Shopping Festivals and Best Timing for Advertising.” *Preparing for submission*

SELECTED WORKING IN PROGRESS

Yue Wang, “When Comments Strike a Chord: How Timestamp Congruence Reshape Creator Content Design.”

Ziyuan Li, **Yue Wang**, Xiabing Zheng, “Empowering Financial Decisions: The Role of AI Chatbots in Preference Discovery.”

CONFERENCE PRESENTATIONS

Inform's Annual Meeting 2023

Phoenix AZ

PROFESSIONAL & RESEARCH EXPERIENCE

Ele.me, Alibaba, Shanghai, China

Research Intern

Data Algorithm Group, mentored by Zhe Li

Apr 2024–Apr 2025

Foster School of Business, University of Washington, Seattle, WA

Research Assistant

Information System Department, supervised by Prof. Yong Tan

Aug 2017–Sep 2017

TEACHING EXPERIENCE

Teaching Interests

Machine Learning in Marketing, Digital Marketing, Marketing Analytics, Quantitative Marketing Research, Marketing Management, Retailing

Teaching Assistant

Hong Kong University of Science and Technology

Retailing (*Undergraduate*)

Spring 2024

Marketing Management (*Undergraduate*)

Fall 2023

Consumer Behavior (*Undergraduate*)

Spring 2023

Consumer Behavior (*Undergraduate*)

Fall 2022

Retailing (*Undergraduate*)

Spring 2022

Marketing Analytics (*Undergraduate*)

Fall 2021

University of Rochester

Intro to Business Analytics (*Graduate*)

Fall A 2019

Social Media Analytics (*Graduate*)

Fall B 2019

RESEARCH COURSEWORKS

Hong Kong University of Science and Technology

MARK 5410	Seminar in Quantitative Modeling	Ying Zhao
MARK 5420	Behavioral Decision Theory	A.V. Muthkrishnan
MARK 5520	Experimental Design and Analysis for Behavioral Research	Rongrong Zhou
MARK 6510	Current Topics in Consumer Research	Jiewen Hong
MARK 6900	Quantitative Marketing	Song Lin
MKT 8633	Empirical Marketing Research (<i>at CityU</i>)	Joseph Ryoo
ECON 5630	Empirical Industrial Organization	Kohei Kawaguchi
MIMT 5310	Understanding Consumers: A Strategic Approach	Amy N. Dalton

University of Rochester

AEC 511	Advanced Price Theory I	Michael Raith
AEC 513	Industrial Organization Theory	Greg Shaffer; Heikki Rantakari
AEC 514	Game Theory	Heikki Rantakari
AEC 520	Advanced Causal Inference/Machine Learning	Paul Ellickson
ECON 484	Math Statistics/Econometrics	Nese Yildiz
ECON 485	Intro to Econometrics I	Bin Chen
ECON 487	Research in Applied Econometrics	Ronni Pavan
MSM 504	Theory of Probability & Stochastic	Henri Groenevelt
MSM 505	Theory of Probability & Stochastic II	Phillip Lederer
MSM 511	Advanced Topics in CIS and OM	Yaron Shaposhnik; Huaxia Rui
MSM 522	Optimization	Phillip Lederer
CIS 417	Introduction to Business Analytics	Rajiv M. Dewan
CIS 432	Predictive Analysis/Python	Yaron Shaposhnik
CIS 511	Research Topics and Methods in Information Systems	Huaxia Rui

SKILLS AND INTERESTS

Programming: R, Python, PyTorch, Fortran, Stata, SAS, SQL, C, Tableau, Matlab, Mathematica
Language: English (proficient), Mandarin Chinese (native)
Interests: Piano (Level 8), Latin (Level 6), Folk Dance (Level 6), Musical Theory (Level 3), Salsa, Cha-cha, Rumba, Snowboarding

ABSTRACTS

“Demand Structure in Two-Sided Markets: A Network Based Revenue Analysis Approach.” with Yi Zhao, Ying Zhao (*Job Market Paper*)

The seller base is critical to a platform’s success, which can attract and retain buyers, driving platform revenue. One key decision for the platform is to manage this seller base—determine which sellers to host, prioritize, or incentivize, and how to enhance their product offerings. Accurately evaluating the economic value that sellers bring to the platform is essential. However, this evaluation is complicated by various interdependencies among buyers and sellers, such as competition or complementation among sellers, interactions between buyers and sellers, and competition among buyers. To address these challenges, this paper proposes a network-based approach that integrates multiple machine learning methods, including Variational Autoencoders (VAE), Graph Neural Networks (GNN), and Gated Recurrent Units (GRU), to capture the sellers’ revenue contributions to the platform in the context of online food delivery. Compared to the unit-based evaluation approach that is solely based on individual seller characteristics, this approach takes into account how other sellers and buyers affect the focal seller’s revenue, as well as how the focal seller impacts others. It also accounts for the evolution of the interdependencies among buyers and sellers, along with changes in their characteristics over time. Estimation results show that this model outperforms the non-network-based models, highlighting the importance of considering the network structure of the platform. Counterfactual experiments based on the estimated model further provide insights into the platform’s strategies for inviting new sellers, and assisting sellers in localizations and extending their product offerings.

“The Influence of News from Different Media Channels on Consumer Purchase: Insights from the Chinese Pharmaceutical Market.” with Ying Zhao, Yi Zhao, Yang Shi

Inferring the causal impact of news on consumer preference is challenging due to potential endogeneity issues, such as omitted variable bias and reverse causality. We leverage the unique context of the pharmaceutical market in China during COVID-19, characterized by high intensity and variation in news coverage across time and media channels regarding the effectiveness of Chinese medicine in combating COVID-19, to make causal inferences about the differing impacts of news from various channels (TV, online news platforms and social media) on consumer preferences and purchasing behaviors in the pharmaceutical categories unrelated to COVID-19. During this period, a significant portion of news coverage is driven by external events related to research breakthroughs and clinical findings on the effectiveness of Chinese medicine. This provides strong instrument variables that enable us to address endogeneity concerns in making causal inferences. Our findings suggest that the three media channels affect consumer purchases differently. The popularity of news about Chinese medicine from social media, irrespective of its sentiment, positively affects the sales of Chinese medicine. In contrast, both the popularity and positivity of news from online news platforms play a positive role. Further analysis suggests that these effects exhibit different interactive patterns with consumers’ pre-existing preferences.

“Show Me Some Effort! The Effect of Liking versus Comments and Their Presentation Format on User-Generated Content.” with Ying Zhao, Min Zhao

Motivated by the challenge of content underprovision on social media platforms, the current work draws upon research on reciprocation and unpacking to examine the differentiating effect of feedback type (likes versus comments) and presentation format (packing versus unpacking) on user-generated content (UGC). Using field data from NetEase Cloud Music, the authors demonstrate empirically that comments from viewers are more effective than likes in motivating subsequent content generation, despite the greater number of likes. Addressing the natural confound in the field setting that comments are often viewed individually in an unpacked manner whereas likes are viewed in a packed format as a total number, the authors conducted two follow-up experiments to examine the effect of unpacking (i.e., displaying feedback as separate individual feedback). The results showed that holding feedback type and amount constant, presenting viewers’ feedback in an unpacked format

increases creators' subsequent content generation because of the increase in perceived effort behind the feedback under an unpacked format. Using a multi-method approach, this research provides insights into the motivation for UGC and offers actionable managerial implications in designing effective strategy for platforms to display feedback and elicit more engaged content generation.

“Ride the Wave or Not? The Spillover Effect of Online Shopping Festivals and Best Timing for Advertising.” with Xiaobei Shen, Xiabing Zheng

This study investigates the spillover effect of online shopping festivals (hosted by e-commerce platforms) on viewers' reactions to short-video advertising (on media platforms) using a natural experiment. As e-commerce shopping festivals are now spanning longer periods, coupled with firms having the ability to customize the release time of short-video ads on media platforms, it is valuable to explore how the spillover effect changes over time. We do find the existence of the spillover effect. During the warm-up and general-promotion periods of the shopping festival, the spillover effect is positive, resulting in increased click-through rates of ads. However, during the peak-promotion and post-promotion periods, the spillover effect becomes negative. We explain the spillover effect as a joint result of the stimulating effect of the festival's environmental cues and the inhibiting effect of financial constraints on consumers. The proposed theoretical mechanisms are verified through a field experiment and a post-hoc analysis. As firms can tailor the time to release their ads, they may ride the wave of exogenous e-commerce shopping festivals, but shall carefully choose the best timing for their advertising on media platforms.
